Re: RejuvaSeal Performance at  
Mid-Continent Airport Wichita, Kansas

Dear Mr. Godden:

In 1999, the General Aviation Apron at Mid-Continent Airport in Wichita, Kansas was sealed as part of routine maintenance on 7 year old Asphalt with RejuvaSeal. I was Project Engineer for this project. The Apron Project covered approximately 100,000 sy with more than 15 Tenant locations. These Tenants had continuous operations and needed to be kept in service. The ease of application of the RejuvaSeal combined with the project management skills of Echelon Industries, Inc. allowed the project to be completed quickly and efficiently with minimal disruptions to operations.

I recently conducted a tour of the Apron and the Asphalt Surface is still in excellent condition. The surface has only very small areas of minor fuel damage and there are no areas where the pavement surface fines are deteriorating. In short, the RejuvaSeal has performed as specified and still has many years of service life.

I would not hesitate to recommend the use of RejuvaSeal for maintenance of Asphalt Pavements if a representative of Echelon Industries states that the product would be cost effective.

Sincerely

Professional Engineering Consultants, P. A.

Gregg K. Greenwood, P.E.  
Allied Laboratories Department Manager
